*Astrophysics and Space Science* is a journal open primarily to original contributions from the entire domain of astrophysics and allied fields of cosmo-chemistry, dynamics, etc. – stellar, galactic and extragalactic – excluding, however, the Sun; and with emphasis on topics opened up by the methods of space research. It contains observational and theoretical papers as well as those concerned with the techniques of instrumentation (ground-based optical and radio telescopes, spectrometric equipment, as well as with the instrumentation associated with balloon, rocket, or satellite astronomy).
